Dear Mr Dennies,

### **ENVIRONMENTAL PERMITTING (ENGLAND AND WALES) REGULATIONS 2010 INSPECTION OF PERMITTED INSTALLATION, PERMIT NUMBER: D/47/6.4(B)(B)**

I write with reference to my inspection conducted on the 19<sup>th</sup> January 2011 of Roy Dennies Signs.

I can confirm that the conditions of the Permit were being complied with during my inspection and it was evident that the site was maintained to a high standard.

All local authorities undertake a risk assessment method to determine the relative level of risk associated with installations regulated under the Local Air Pollution Control regime. The outcome of this assessment is used to determine the number of inspections and regulatory time expected for each process. A copy of the completed risk assessment form for Roy Dennies Signs has been enclosed with this letter.

The overall score for the Permitted Installation has been calculated as follows:

**Overall Score for the Installation = -5**  
**Regulatory Effort Category = LOW**

The results of the risk assessment indicate that you are to have one 'full' inspection every two years in order to comply with the above Regulations and subsequent regulatory process.

Please also find enclosed a questionnaire about the service you have received. I would be grateful if you could complete this and return it in the enclosed prepaid envelope.

If you have any questions or queries about this letter, please contact **Minna Haines** on telephone number **01530 454575** or by e-mailing **minna.haines@nwleicestershire.gov.uk**.

Yours sincerely

**Minna Haines**  
**Environmental Health Officer**
