

DATA PROTECTION IMPACT ASSESSMENT

CARRYING OUT A DATA PROTECTION IMPACT ASSESSMENT ON SURVEILLANCE CAMERA SYSTEMS

Purpose of this advice and template

Principle 2 of the surveillance camera code of practice¹ states that the use of a surveillance camera system must take into account the effect on individuals and their privacy, with regular reviews to ensure its use remains justified. The best way to ensure this is by carrying out a data protection impact assessment (DPIA) before any surveillance camera system is installed, whenever a new technology or functionality is being added on to an existing system, or whenever there are plans to process more sensitive data or capture images from a different location. This will assist in assessing and mitigating any privacy issues linked to the use of a surveillance system.

A DPIA is one of the ways that a data controller can check and demonstrate that their processing of personal data is compliant with the General Data Protection Regulation (GDPR)² and the Data Protection Act (DPA) 2018. There are statutory requirements to carry out a DPIA in Section 64 DPA 2018 and article 35 of the GDPR.

The Information Commissioner has responsibility for regulating and enforcing data protection law, and has published [detailed general guidance](#) on how to approach your data protection impact assessment. In many cases under data protection law, a DPIA is a mandatory requirement. The Surveillance Camera Commissioner (SCC) and the Information Commissioner's Office (ICO) has worked together on this advice, which is tailored to the processing of personal data by surveillance camera systems.

Suggested steps involved in carrying out a DPIA are shown in **Appendix One**.

A further benefit of carrying out a DPIA using this template is that it will help to address statutory requirements under the Human Rights Act 1998 (HRA). Section 6(1) HRA provides that it is unlawful for a public authority to act in a way which is contrary to the rights guaranteed by the European Convention on Human Rights (ECHR). Therefore, in addition to the above, as a public body or any other body that performs public functions you must make sure that your system complies with HRA requirements. Whilst the particular human rights concerns associated with surveillance tend to be those arising from Article 8 which sets out a right to respect for privacy, surveillance does also have the potential to interfere with rights granted under other Articles of the ECHR such as conscience and religion (Article 9), expression (Article 10) or association (Article 11).

If you identify a high risk to privacy that you cannot mitigate adequately, data protection law requires that you must consult the ICO before starting to process personal data. Use of any surveillance camera system with biometric capabilities, such as Automated Facial Recognition technology, is always likely to result in a high risk to the rights and freedoms of individuals and therefore a DPIA must always be carried out in respect of those systems before you process any personal data. There is a risk matrix at **Appendix Two** that can help you to identify these risks.

Who is this template for?

To complement the ICO's detailed general guidance for DPIAs, the SCC has worked with the ICO to prepare this template specifically for those organisations in England and Wales that must have regard to the Surveillance Camera Code of Practice under Section 33(5) of the Protection of Freedoms Act 2012. This template helps such organisations to address their data protection and human rights obligations in the specific context of operating surveillance cameras.

This surveillance camera specific DPIA is also intended to be of value to the wider community of public authorities and any other bodies, whether public or private, who perform public functions. This secondary

¹ Surveillance Camera Code of Practice issued by the Home Secretary in June 2013 under Section 30(1)(a) Protection of Freedoms Act 2012

² Regulation (EU) 2016/679 of the European Parliament and European Council, also known as the General Data Protection Regulation, was transposed into UK law through the Data Protection Act 2018. Any processing of personal data by competent authorities for the prevention, investigation, detection or prosecution of criminal offences is regulated under Part 3 of the Data Protection Act 2018 which transposes Directive (EU) 2016/680, also known as the Law Enforcement Directive, into UK law.

audience is subject to the same legal obligations under data protection and human rights legislation, and is encouraged by the SCC to follow guidance in the Surveillance Camera Code of Practice on a voluntary basis.

When should you carry out the DPIA process for a surveillance camera system?

- Before any system is installed.
- Whenever a new technology or functionality is being added on to an existing system.
- Whenever there are plans to process more sensitive data or capture images from a different location.

In deciding whether to carry out a DPIA and its scope, consideration must be given to the nature and scope of the surveillance camera activities and their potential to interfere with the privacy rights of individuals.

You **must** carry out a DPIA for any processing of surveillance camera data that is likely to result in a high risk to individual privacy. The GDPR states that a DPIA “shall in particular be required in the case of systematic monitoring of publicly accessible places on a large scale” (Article 35).

Furthermore, as a controller in relation to the processing of personal data, you must seek the advice of a designated Data Protection Officer when carrying out a DPIA.

To assess the level of risk, you must consider both the likelihood and the severity of any impact on individuals. High risk could result from either a high probability of some harm, or a lower possibility of serious harm. It is important to embed DPIAs into your organisational processes such as project planning and other management and review activities, and ensure the outcome can influence your plans. A DPIA is not a one-off exercise and you should see it as an ongoing process, and regularly review it.

As part of an ongoing process, your DPIA should be updated whenever you review your surveillance camera systems, it is good practice to do so at least annually, and whenever you are considering introducing new technology or functionality connected to them.

The situations when a DPIA should be carried out, include the following:

- When you are introducing a new surveillance camera system.
- If you are considering introducing new or additional technology that may affect privacy (e.g. automatic facial recognition, automatic number plate recognition (ANPR), audio recording, body worn cameras, unmanned aerial vehicles (drones), megapixel or multi sensor very high resolution cameras).
- When you are changing the location or field of view of a camera or other such change that may raise privacy concerns.
- When you are reviewing your system to ensure that it is still justified. Both the Surveillance Camera Code of Practice and the ICO recommend that you review your system annually.
- If your system involves any form of cross referencing to other collections of personal information.
- If your system involves more than one company or agency undertaking activities either on your behalf or in their own right.
- When you change the way in which the recorded images and information is handled, used or disclosed.
- When you increase the area captured by your surveillance camera system.
- When you change or add an end user or recipient for the recorded information or information derived from it.

If you decide that a DPIA is not necessary for your surveillance camera system, then you must record your decision together with the supporting rationale for your decision.

Description of proposed surveillance camera system

Provide an overview of the proposed surveillance camera system

This should include the following information:

- An outline of the problem(s) the surveillance camera system is trying to resolve.
- Why a surveillance camera system is considered to be part of the most effective solution.
- How the surveillance camera system will be used to address the problem (identified above).
- How success will be measured (i.e. evaluation: reduction in crime, reduction of fear, increased detection etc).

In addition, consideration must be given to the lawful basis for surveillance, the necessity of mitigating the problem, the proportionality of any solution, and the governance and accountability arrangements for any surveillance camera system and the data it processes.

The following questions must be considered as part of a DPIA:

- Do you have a lawful basis for any surveillance activity?
- Is the surveillance activity necessary to address a pressing need, for example: public safety; the prevention, investigation, detection or prosecution of criminal offences; or, national security?
- Is surveillance proportionate to the problem that it is designed to mitigate?

If the answer to any of these questions is no, then the use of surveillance cameras is not appropriate.

Otherwise please proceed to complete the template below, where your initial answers to these questions can also be recorded.

DATA PROTECTION IMPACT ASSESSMENT TEMPLATE

Statutory requirements in Section 64 DPA 2018 and article 35 of the GDPR are that your DPIA **must**:

- describe the nature, scope, context and purposes of the processing;
- assess necessity, proportionality and compliance measures;
- identify and assess risks to individuals; and
- identify any additional measures to mitigate those risks.

Statutory requirements in Sections 69-71 DPA 2018 and articles 37-39 of the GDPR are that if you are a public authority, or if you carry out certain types of processing activities, you **must** designate a Data Protection Officer (DPO) and always seek their advice when carrying out a DPIA. The ICO provides [guidance on the requirement to appoint a DPO](#). If you decide that you don't need to appoint a DPO you should record your decision and your supporting rationale. In the performance of their role, a DPO must report to the highest management level within the controller.

These statutory requirements indicate that a DPIA should be reviewed and signed off at the highest level of governance within an organisation.

To help you follow these requirements this template comprises two parts.

Level One considers the general details of the surveillance camera system and supporting business processes, including any use of integrated surveillance technologies such as automatic facial recognition. It is supported by **Appendix Three** which helps to capture detail when describing the information flows. The SCC's [Passport to Compliance](#) provides detailed guidance on identifying your lawful basis for surveillance, approach to consultation, transparency and so on.

Level Two considers the specific implications for the installation and use of each camera and the functionality of the system.

Template – Level One

Location of surveillance camera system being assessed:

[REDACTED]

Date of assessment

21/03/19

Review date

21/05/19

Name of person responsible

Paul Collett

Name of Data Protection Officer

Nicola Taylor

GDPR and Data Protection Act 2018 and Surveillance Camera Code of Practice

1. What are the problems that you need to address in defining your purpose for using the surveillance camera system? Evidence should be provided which includes relevant available information, such as crime statistics for the previous 12 months, the type, location, times and numbers of crime offences, housing issues relevant at the time, community issues relevant at the time and any environment issues relevant at the time.

Reports of Drug dealing and ASB in the carpark of [REDACTED]. Investigation at the request of residents via the Ward Councillor. The camera used is a NOMAD Multi camera. It has 2 IR, PTZ camera units and a single fixed gaurdian camera. All are full HD. they are not in Smoked Globes and are clearly visible. The cameras will NOT be set on any patrolling feature. This is NOT a monitored system and is only accessed post review. Deployment is 2 months with a review at the end of the deployment. If not accessed in this time it will be removed.

Can you include the dates & number of reports? Any knowledge of reports to police?

2. Can surveillance camera technology realistically mitigate the risks attached to those problems? State why the use of surveillance cameras can mitigate the risks in practice, including evidence to justify why that would be likely to be the case.

The Camera will be used to gather evidence of unknown individuals using the car park to sell drugs. We have this reported to us via the ward councillor. We have chosen the deployment following a meeting at the JAG and it was decided that this the best option to address these reports.

3. What other less privacy-intrusive solutions such as improved lighting have been considered? There is a need to consider other options prior to any decision to use surveillance camera systems. For example, could better lighting or improved physical security measures adequately mitigate the risk? Does the camera operation need to be 24/7? Where these types of restrictions have been considered, provide your reasons for not relying on them and opting to use surveillance cameras as specified.

Area is off camera for the town centre system. Housing staff access the area and Police do patrol this location. However, reports suggest that the behaviour is at a time outside of normal office hours. We need a 24hr solution to investigate this crime trend. The Housing team have invested in the building and actively managed the tenants. However, it is believed that none of the residents are responsible for the behaviour.

4. What is the lawful basis for using the surveillance camera system? State which lawful basis for processing set out in Article 6 of the GDPR or under Part 3 of DPA 2018 applies when you process the personal data that will be captured through your surveillance camera system.

To investigate reported criminal behaviour (Selling Drugs). Our aim is to prevent , detect or deter crime. I believe that this action is lawful as it will be processing information that is necessary for the performance of a task carried out in the public interest or in the exercise of official authority vested in the controller, in this case in our duty to reduce crime and disorder.

GDPR - 6 1 (e) - Performance of a task carried out in the public interest

5. Can you describe the information flows? State how data will be captured, whether it will include audio data, the form of transmission, if there is live monitoring or whether data will be recorded, whether any integrated surveillance technologies such as automatic facial recognition is used, if there is auto deletion after the retention period, written procedures for retention in line with stated purpose, written procedures for sharing data with an approved third party, record keeping requirements, cyber security arrangements and what induction and ongoing training is provided to operating staff. Specific template questions to assist in this description are included in **Appendix Three**.

The data is captured on a secure (password protected) and encrypted harddrive using a bespoke operating system. the information is stored on an edge recording device, (hard drive inside the camera)

Access is via 4G on a Computer stored in a secure facility. (CCTV control Room) this is manned by SIA badge staff. footage is seized using the council process and meets the criminal standard for Data handling.

The system can produce still images and video, but can not edit the footage beyond cutting video length. Access is restricted to police and council community safety team. It is not shared beyond this.

6. What are the views of those who will be under surveillance? Please outline the main comments from the public resulting from your consultation – as part of a DPIA, the data controller should seek the views of those subjects who are likely to come under surveillance or their representatives on the proposition, without prejudice to the protection of commercial or public interests or the security of processing operations. This can often be achieved by existing local consultation mechanisms such as local area committees or safer neighbourhood team meetings; but, if necessary depending on the privacy intrusion of the surveillance in question, other methods could be considered such as face to face interviews, online surveys, questionnaires being sent to residents/businesses and addressing focus groups, crime & disorder partnerships and community forums. The Data Protection Officer may be able to offer advice on how to carry out consultation.

This is a reactive deployment and we have NOT consulted. all residents of the property will be informed of the install. the decision to install was made at the Joint Action Group (JAG). Police, Housing, Social care , mental health and others were present. we never consult of mobile deployments. a letter to each resident will explain the deployment and how to make comment on this use of camera.

7. What are the benefits to be gained from using surveillance cameras? Give specific reasons why this is necessary compared to other alternatives. Consider if there is a specific need to prevent/detect crime in the area. Consider if there would be a need to reduce the fear of crime in the area, and be prepared to evaluate.

Our aim it to prevent or detect crimes that are affecting the area. the evidence will be used to improve the lives of residents to by preventing and detecting crime. It also shows our commitment to residents who raised concerns with their ward councillor.

8. What are the privacy risks arising from this surveillance camera system? State the main privacy risks relating to this particular system. For example, who is being recorded; will it only be subjects of interests? How long will recordings be retained? Will they be shared? What are the expectations of those under surveillance and impact on their behaviour, level of intrusion into their lives, effects on privacy if safeguards are not effective? What is your assessment of both the likelihood and the severity of any impact on individuals?

This deployment is in residential area and will impact those that access the building using the rear carpark. There is a side window on number [REDACTED] the faces the Location of the camera. the setting of the camera will avoid this location and the system can install a privacy screen. 2 windows will also be visible on [REDACTED], but the angles are such that the camera will not be able to see into the property.

The setting of the camera will cover the access point to the CARPARK only so we cover all people using the area and gaining access to that area. the Door is NOT covered. the windows into the ground floor flats may be seen but the camera setting will minimise this. The footage will only be accessed by the staff POST incident. no live monitoring will occur. no access without a report will be made. the cameras will be set towards the carpark and will NOT be on a patrol. the cameras will not be moving and are not obscured (IE you can see the direction of coverage)

The footage is stored for 30 days. All this will be explained to the residents, Including number [REDACTED] and [REDACTED]. The focus will be on those PARKING, not visiting the Building.

9. Have any data protection by design and default features been adopted to reduce privacy intrusion? Could any features be introduced as enhancements? State the privacy enhancing techniques and other features that have been identified, considered and accepted or rejected. For example, has consideration been given to the use of technical measures to limit the acquisition of images, such as privacy masking on cameras that overlook residential properties? If these have not been adopted, provide a reason.

The camera securely stores the data and this is encrypted on the hard drive. Even if the unit is stolen the data can't be access without the 8 digit Alphanumerical code and password. The Laptop with this information is secure in an access controlled room (CCTV control).

10. What organisations will be using the surveillance camera images, and where is the controller responsibility under the GDPR and Data Protection Act 2018? List the organisation(s) that will use the data derived from the camera system and identify their responsibilities, giving the name of the data controller(s) and any data processors. Specify any data sharing agreements you have with these organisations.

All data is the property of NWLDC and we are the Data Controller. The only access granted will be with police under Sec 115 CDA. The data will be processed (Downloaded and saved to a DVD) by control room staff whom are SIA badged. Any data handed to the police will be done in accordance with NWLDC operating process and police guidance for the seizing of evidence. This is all recorded in the control room.

11. Do the images need to be able to recognise or identify individuals, or could the purpose be met using images in which individuals cannot be identified? Explain why images that can recognise or identify people are necessary in practice. For example, cameras deployed for the purpose of ensuring traffic flows freely in a town centre may not need to be capable of capturing images of identifiable individuals, whereas cameras justified on the basis of dealing with problems reflected in assessments showing the current crime hotspots may need to capture images in which individuals can be identified.

The camera will be set to identify potential offenders and will be in FULL HD at short range. the identification of individual is the aim so the cameras will gather facial details.

12. How will you inform people that they are under surveillance and respond to any Subject Access Requests, the exercise of any other rights of data subjects, complaints or requests for information? State what privacy notices will be made available and your approach to making more detailed information available about your surveillance camera system and the images it processes. In addition, you must have procedures in place to respond to requests for camera footage in which a subject appears, and to respond to any other request to meet data protection rights and obligations.

A letter to all residents affected this deployments clearly giving the details of the deployments, how to complain their rights and the process to submit a subject access request. Contact numbers and emails will be provided and the Housing officers will also be made aware to ensure that they can talk to the residents about this camera. A sign will also be used to give additional points of contact. Our website also hold the privacy statement aboutr our CCTV that the residents can access.

13. How will you know if the particular camera system/hardware/software/firmware being considered does deliver the desired benefits now and in the future? It is good practice to review the continued use of your system on a regular basis, at least annually, to ensure it remains necessary, proportionate and effective in meeting its stated purpose. State how the system will continue to meet current and future needs, including your review policy and how you will ensure that your system and procedures are up to date in mitigating the risks linked to the problem.

the system used is kept up to date and is serviced once a year. the OS is updated on a regular basis by the supplier. It meets our needs and was purchased for a specifed purpose. the OP is current and upto date.

14. What future demands may arise for wider use of images and how will these be addressed? Consider whether it is possible that the images from the surveillance camera system will be processed for any other purpose or with additional technical factors (e.g. face identification, traffic monitoring or enforcement, automatic number plate recognition, body worn cameras) in future and how such possibilities will be addressed. Will the camera system have a future dual function or dual purpose?

Nil. The only access will be granted to follow up on REPORTED criminal activity.No access for other reasons such as Housing will be granted.

15. Have you considered the extent to which your surveillance camera system may interfere with the rights and freedoms conferred under the European Convention on Human Rights? When we consider data protection, our focus tends to be upon the potential to interfere with the Article 8 right to respect for private and family life. Surveillance undertaken in accordance with the law could, however, interfere with other rights and freedoms such as those of conscience and religion (Article 9), expression (Article 10) or association (Article 11). Summarise your assessment of the extent to which you might interfere with ECHR rights and freedoms, and what measures you need to take to ensure that any interference is necessary and proportionate.

Yes. the deployment covers a public open space where the expection of privacy is lower. the location has alternative access (front door) so residents can leave and access the area without being monitored. the Deployment is lawful with a clear pressing need and has a clear objective.

It does not interfere in any freedoms.

16. Do any of these measures discriminate against any particular sections of the community?

Article 14 of the ECHR prohibits discrimination with respect to rights under the Convention. Detail whether the proposed surveillance will have a potential discriminatory or disproportionate impact on a section of the community. For example, establishing a surveillance camera system in an area with a high density of one particular religious or ethnic group.

No, we are looking for CAR details. the coverage does not impact any particular groups

Template Level Two

This Level 2 template is designed to give organisations a simple and easy to use format for recording camera locations, other hardware, software and firmware on their surveillance camera system, and demonstrating an assessment of risk to privacy across their system and the steps taken to mitigate that risk.

Principle 2 - The use of a surveillance camera system must take into account its effect on individuals and their privacy, with regular reviews to ensure its use remains justified.

When looking at the obligation under the code a risk assessment methodology has been developed to help organisations identify any privacy risks to individual or specific group of individuals (e.g. children, vulnerable people), compliance risks, reputational risks to the organisation and non-compliance with the Protection of Freedoms Act 2012 and/or the Data Protection Act 2018.

A system that consists of static cameras in a residential housing block will generally present a lower risk than a system that has multiple High Definition Pan Tilt and Zoom (PTZ) cameras. However, the DPIA should help identify any cameras (irrespective of the type) that may be directed at a more vulnerable area (e.g. a children's play area) and thus presenting a higher privacy risk. This approach allows the organisation to document a generic and methodical approach to any intrusion into privacy, catalogue your cameras by type and location, and finally identify any cameras that present specific privacy risks and document the mitigation you have taken. It also allows you to consider the risks associated with any integrated surveillance technology such as automatic facial recognition systems, along with security measures against cyber disruption of your system,

As an organisation that operates a surveillance camera system you will also be the controller of the personal data captured by its cameras. Under DPA 2018 (Sections 69-71), a data controller is under a legal obligation to designate and resource a data protection officer and to seek their advice when carrying out a DPIA.

An example of a risk assessment matrix is shown in **Appendix Two**.

When undertaking a DPIA, it is essential to be able to confirm where the organisation's cameras are sited. It is good practice for all organisations to maintain an asset register for all of their hardware (including cameras), software and firmware. This allows the system operator to record each site and system component in a manner to lead into the level two process.

If any new site or installation sits outside of the pre-defined fields, or additional integrated surveillance technologies are added, then new categories can be added as required

Overall step one and step two will cover the uses of hardware, software and firmware of the system. However, it may be contrary to the purpose of your surveillance camera system to publically list or categorise each individual asset.

Template – Level Two

Step 1 (definition of hardware, software and firmware including camera types utilised)

Cameras Specification: System operator owner should include below all camera types and system capabilities (e.g. static, PTZ, panoramic, ANPR) and their likely application and expected use. This will differ by organisation, but should be able to reflect a change in camera ability or system functionality due to upgrade.

Please see example below:

ID	Camera types	Makes and models used	Amount	Description	Justification and expected use
1.			300	Static images, no movement or zoom function	Fully monitored rec 24hrs, zooming..., Public Safety
2.		MICI 400/550, Predator PTZ, Predator White light	150	Pan tilt and zoom function, Standard definition	Public space monitoring from CCTV control room 24 hrs
3.	High-zoom PTZ	JVC "box" (pentax lens), Bosch Shoe box	50	Pan, tilt and zoom function. long zoom lenses, idea for long distance monitoring	Long stretches of road, across large areas of land. This provides better coverage over straight roads and ensures an ability to get a high quality image over long distances.
4.	HD static				
5.	HD PTZ				
6.					
7.					
8.					
9.					
10.					
11.					

Step 2 (location assessment)

Location: Each system operator/owner should list and categorise the different areas covered by surveillance on their system. This list should use the specifications above which ID (types) are used at each specific location.

CAT	Location type	Camera types used	Amount	Recording	Monitoring	Assessment of use of equipment (mitigations or justifications)
A.	Town centre	All	250	24hrs	24hrs (only maximum 3 operators) – likely average patrol high hourly	The privacy level expectation in a town centre is very low; our town centres are well signed with appropriate signage for CCTV its use and purpose with contact details.

CAT	Location type	Camera types used	Amount	Recording	Monitoring	Assessment of use of equipment (mitigations or justifications)
B.	Public car park	1, 5, 6	100			
C.	Parks					HD camera only include due to proximity to town HD cam
D.	Play areas					
E.	Housing blocks internal	1, 2	200	24hrs (calendar month)	Limited due to the fact that most are static cameras	High level asb historical problems (please see statistical assessment in annual review)
F.	Housing estate (street)					
G.	Residential street					Cameras are install here to respond to high crime trends, deal with the fear of crime
H.						
I.						
J.						
K.						
L.						

Step 3 (Cameras or functionality where additional mitigation required)

Asset register: It is considered to be good practice for all organisations to maintain an asset register for all of the components which make up their system. This allows the system owner to record each site and equipment installed therein categorised in a manner to lead into the level two process.

Please document here any additional mitigation taken on a camera or system to ensure that privacy is in line with the ECHR requirements.

Asset number	Reviewed	Camera type	Location category	Further mitigation/ comments (optional)
230	xx/xx/xxxx	A		(E.g. although this camera is in the town centre, at the height at which it has been installed there is an ability to see into residential windows, this has been removed as a risk through the use of privacy screens.)

Asset number	Reviewed	Camera type	Location category	Further mitigation/ comments (optional)

Step 4 (Mitigation for specific cameras and any integrated surveillance functionality that have high privacy risks)

Where there is a very high risk to privacy you may wish to conduct an extensive DPIA of specific installations or functionality and have it fully documented. Where you are unable to mitigate the risk adequately you **must** refer your DPIA to the ICO for review.

DPIA for specific installations or functionality

Camera number

Camera location

Privacy risk(s)	Solution	Outcome (Is the risk removed, reduced or accepted)	Justification (Is the impact after implementing each solution justified, compliant and proportionate to the aim of the camera?)

Measures approved by:

Integrate actions back into project plan, with date and responsibility for completion

Name

Date

Residual risks approved by:

If you identify a high risk that you cannot mitigate adequately, you must consult the ICO before starting to capture and process images

Name

Date

DPO advice provided:

DPO should advise on compliance and whether processing can proceed

Name

Nicola Taylor

Date

25/03/2019

Summary of DPO advice

Advised that the ward councillor/we must document reports from the public/residents. We need to keep a log of complaints/reports from the public to enable us to review these prior to the deployment of a CCTV camera. Establish if police have received reports from the public.

Section:

2: Expand on why this will mitigate the risk

8: Ensure that we redact if the CCTV is shared

11: Are we aiming to capture number plates?

12: Whose email and contact telephone number will be provided?

15: Include individuals rights in the letter. Advise use of front door.

DPO advice accepted or overruled by:

If overruled, you must explain your reasons

Name

Date

Comments

Consultation responses reviewed by:

If your decision departs from individuals' views, you must explain your reasons

Name

Date

Comments

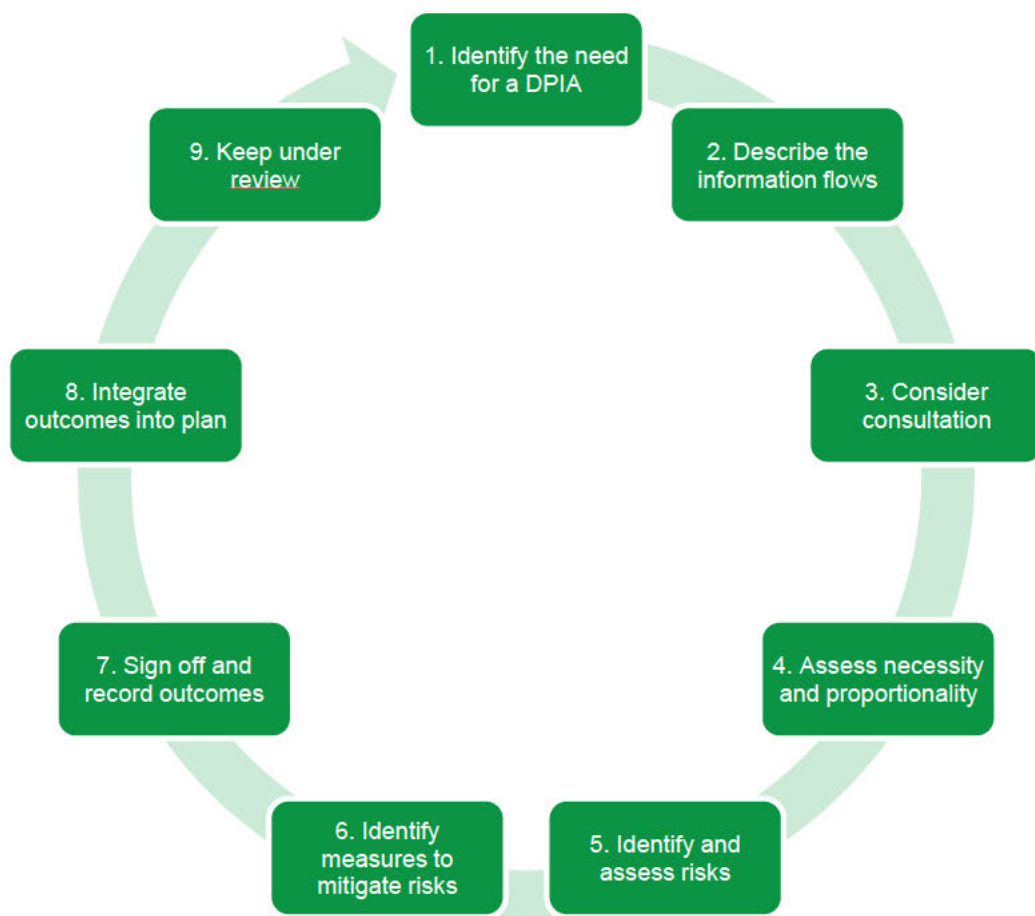

This DPIA will kept under review by:

The DPO should also review ongoing compliance with DPIA

APPENDIX ONE: STEPS IN CARRYING OUT A DPIA

APPENDIX TWO: DATA PROTECTION RISK ASSESSMENT MATRIX

Scoring could be used to highlight the risk factor associated with each site or functionality if done utilising the risk matrix example shown below.

Matrix Example:

[illegible]

Be aware that use of any surveillance camera system with biometric capabilities, such as Automated Facial Recognition technology, is always likely to result in a high risk to the rights and freedoms of individuals and therefore a DPIA must always be carried out in respect of those systems before you process any personal data.

APPENDIX THREE: LEVEL 1

DESCRIBE THE INFORMATION FLOWS

Optional questions to help describe the collection, use and deletion of personal data.

It may also be useful to refer to a flow diagram or another way of explaining data flows.

5.1 How is information collected?

- | | |
|---|---|
| <input type="checkbox"/> CCTV camera | <input type="checkbox"/> Body Worn Video |
| <input type="checkbox"/> ANPR | <input type="checkbox"/> Unmanned aerial systems (drones) |
| <input checked="" type="checkbox"/> Stand-alone cameras | <input type="checkbox"/> Real time monitoring |
| <input type="checkbox"/> Other (please specify) | |

Mobile CCTV unit-Nomad Multi cam.

5.2 Does the system's technology enable recording?

- ☒ Yes ☐ No

Please state where the recording will be undertaken (no need to stipulate address just Local Authority CCTV Control room or on-site would suffice for stand-alone camera or BWV), and whether it also enables audio recording.

Hard drive built in to the cameras accessed remotely from CCTV control room. All access is fully auditable.

Is the recording and associated equipment secure and restricted to authorised person(s)? (Please specify, e.g. in secure control room accessed restricted to authorised personnel)

the data is secure and encrypted. the equipment is designed for this use and is current and up to date all OS updates.

5.3 What type of transmission is used for the installation subject of this PIA (tick multiple options if necessary)

- | | |
|--|---|
| <input type="checkbox"/> Fibre optic | <input checked="" type="checkbox"/> Wireless (please specify below) |
| <input type="checkbox"/> Hard wired (apart from fibre optic, please specify) | <input type="checkbox"/> Broadband |
| <input type="checkbox"/> Other (please specify) | |

4G or Short range wifi. preferred option is 4G access.

5.4 What security features are there to protect transmission data e.g. encryption (please specify)

encrypted, 2 tier password. access terminal is in a secure location. it is only active when in use. IE turned off when not in use. LAPTOP is updated.

5.5 Where will the information be collected from?

- ☐ Public places (please specify) ☒ Car parks
☒ Buildings/premises (external) ☐ Buildings/premises (internal public areas) (please specify)

- ☐ Other (please specify)

5.6 From whom/what is the information collected?

- ☐ General public in monitored areas (general observation) ☐ Vehicles
☒ Target individuals or activities (suspicious persons/incidents) ☐ Visitors
☐ Other (please specify)

5.7 What measures are in place to mitigate the risk of cyber attacks which interrupt service or lead to the unauthorised disclosure of images and information?

System is secure by design and this was part of the process to purchase the camera. As far as we can assert, this is a Secure system using bespoke access via a secure access laptop.

5.8 How is the information used? (tick multiple options if necessary)

- ☐ Monitored in real time to detect and respond to unlawful activities
- ☐ Monitored in real time to track suspicious persons/activity
